

ARIS 9.8 SR2

Octobre 2015

ARIS Product Management

- Releases twice a year
- Fast reaction on customer requirements
- Continuous flow of innovations

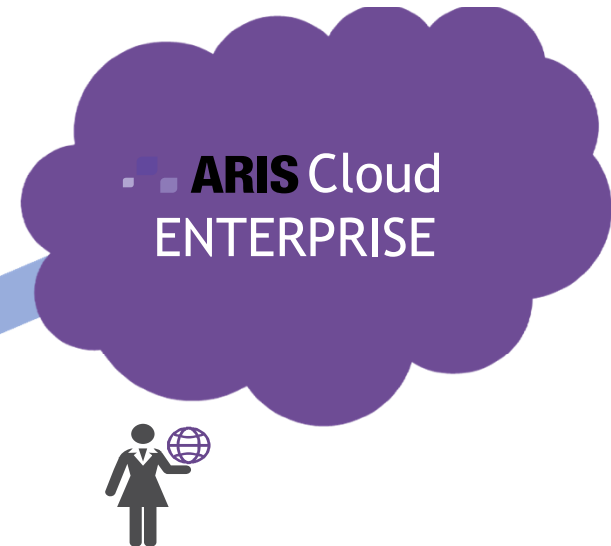

ARIS Cloud Editions

Full-scale Enterprise BPA with the complete ARIS stack

Mature projects with customization and advanced administration

First process improvement projects immediately

About ARIS Cloud

ARIS Cloud is a full-scale Business Process Analysis-as-a-Service product. It powers collaborative process improvement projects around the globe. Subscribe to ARIS Cloud to design, analyze, share and improve processes within minutes.

ARIS Cloud is available in three editions: Basic, Advanced and Enterprise, each providing you with the right features for your current project needs.

A photograph of a workshop wall densely packed with various hand tools. On the left, several large hand saws with curved blades are hanging. In the center, a row of wooden hand planes is mounted on a rack. To the right, numerous chisels with different handle colors (yellow, red, black) are hanging in rows. Other tools like pliers and a mallet are also visible. The tools are organized in a way that suggests a well-used, professional workspace.

Methodology has to evolve to meet the requirements of Business and IT

Enterprise BPMN models for business(!) process modeling

Introduced with ARIS 9.8

Reuse ARIS objects
as BPMN lanes

Analyse org- and IT-systems
beyond models

Complement BPMN lanes
with business logic

ARIS 9.8 SR2 - Highlights in a Nutshell

Methodology

- Customer Experience Mgmt – Describe and optimize Customer Journeys

Robustness & Performance

- Improved Installation & Update Experience
- Reduced amount of processes & memory
- Reduce dependencies of cloud components - faster startup by parallel start of runnables
- Heathchecks and Metrics for ABS
- Tenant Management UI (Step 1, Beta)

Integrations

- Next Maturity step for ARIS / alfabet integration

ARIS Architect / Designer

- Advanced support for update of existing ARIS method filter
- Analysis enhancements
- Enable BPMN through smart design

ARIS Mobile Framework / API

- General availability including infrastructure

Governance, Risk & Compliance

- SSO
- Dashboard integration (with MashZone)
- Control Execution Documentation
- Improved Audit Management

ARIS Connect

- Information capturing: Easy data entry
- Viewing of UML
- Glossary in the portal
- Different conventions per database
- Collaboration: Commenting on objects
- Integration with Risk & Compliance Mgmt

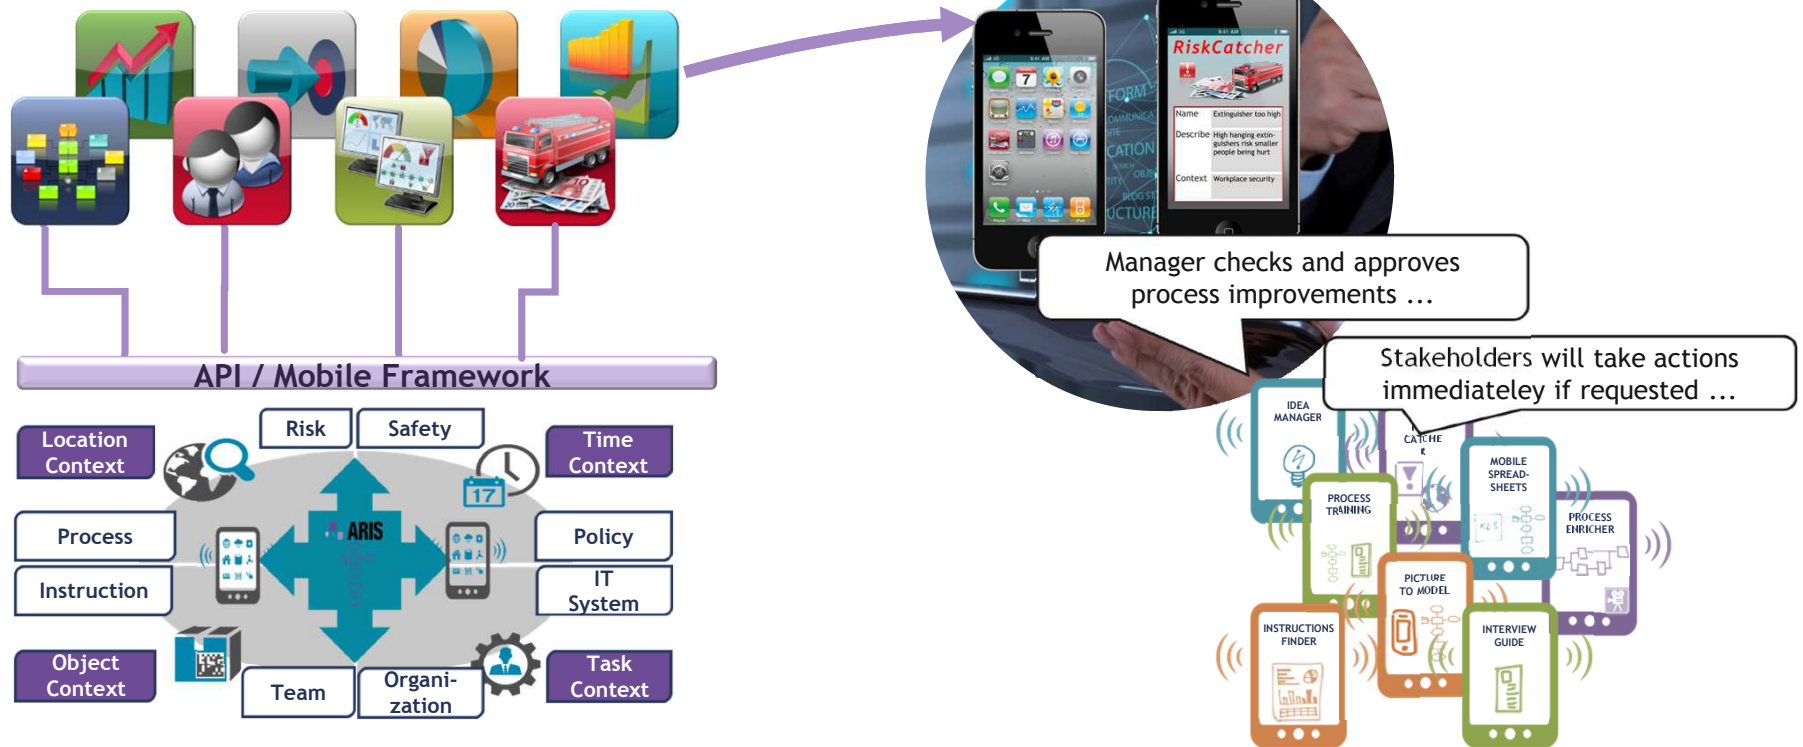

ARIS Cloud (specific)

- ARIS/alfabet integration , Simu, Business Strategy, M2E for ARIS Cloud Enterprise
- Security enhancements
- Application Health Monitoring for ARIS Cloud Enterprise

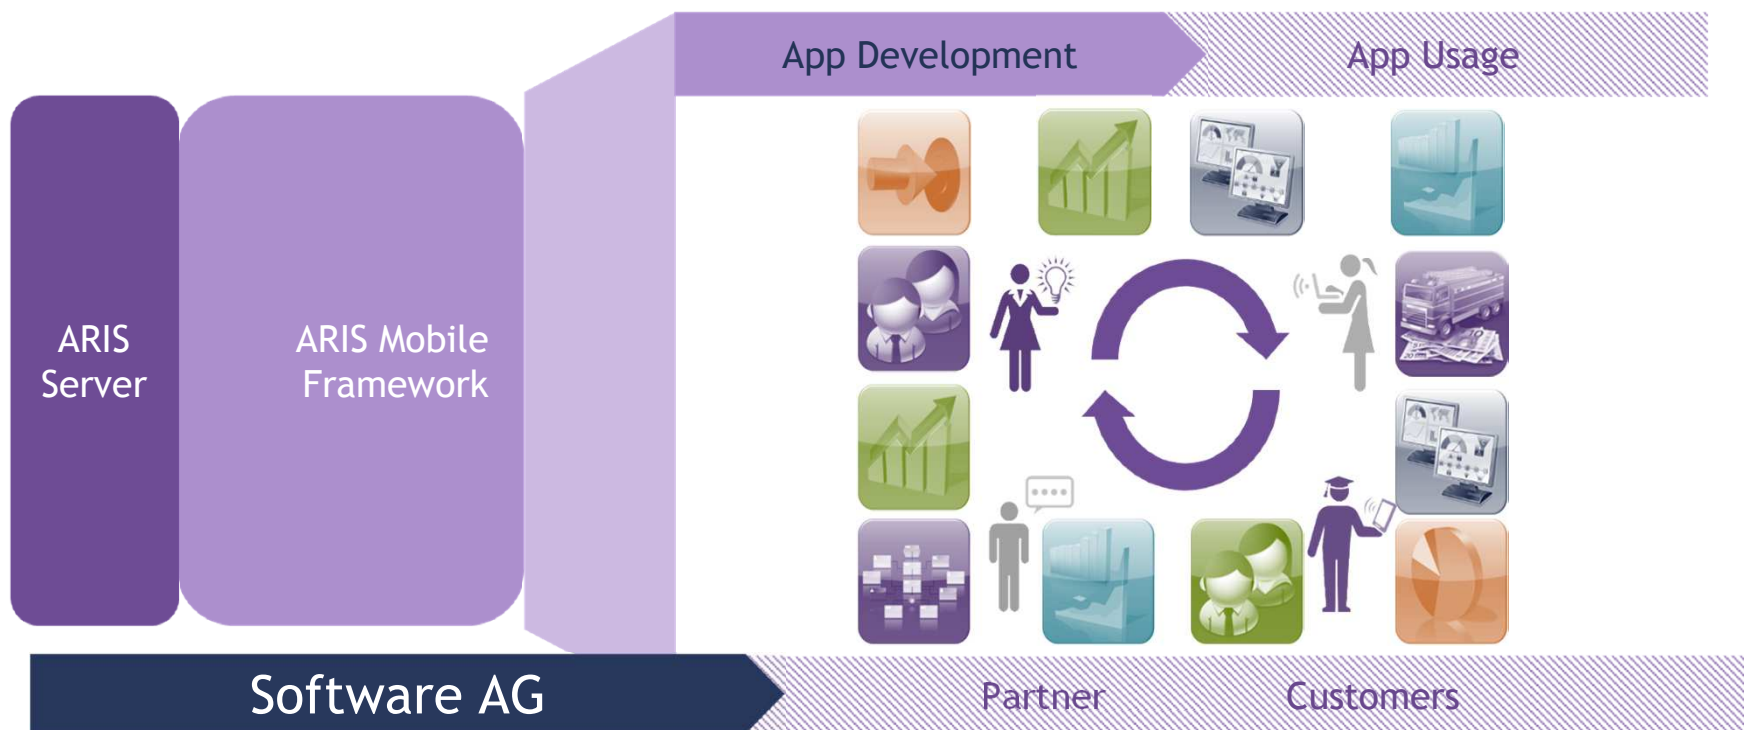

Age of the customer: Companies pursuing best customer journeys to support digital business agenda

Empower business users with the right information

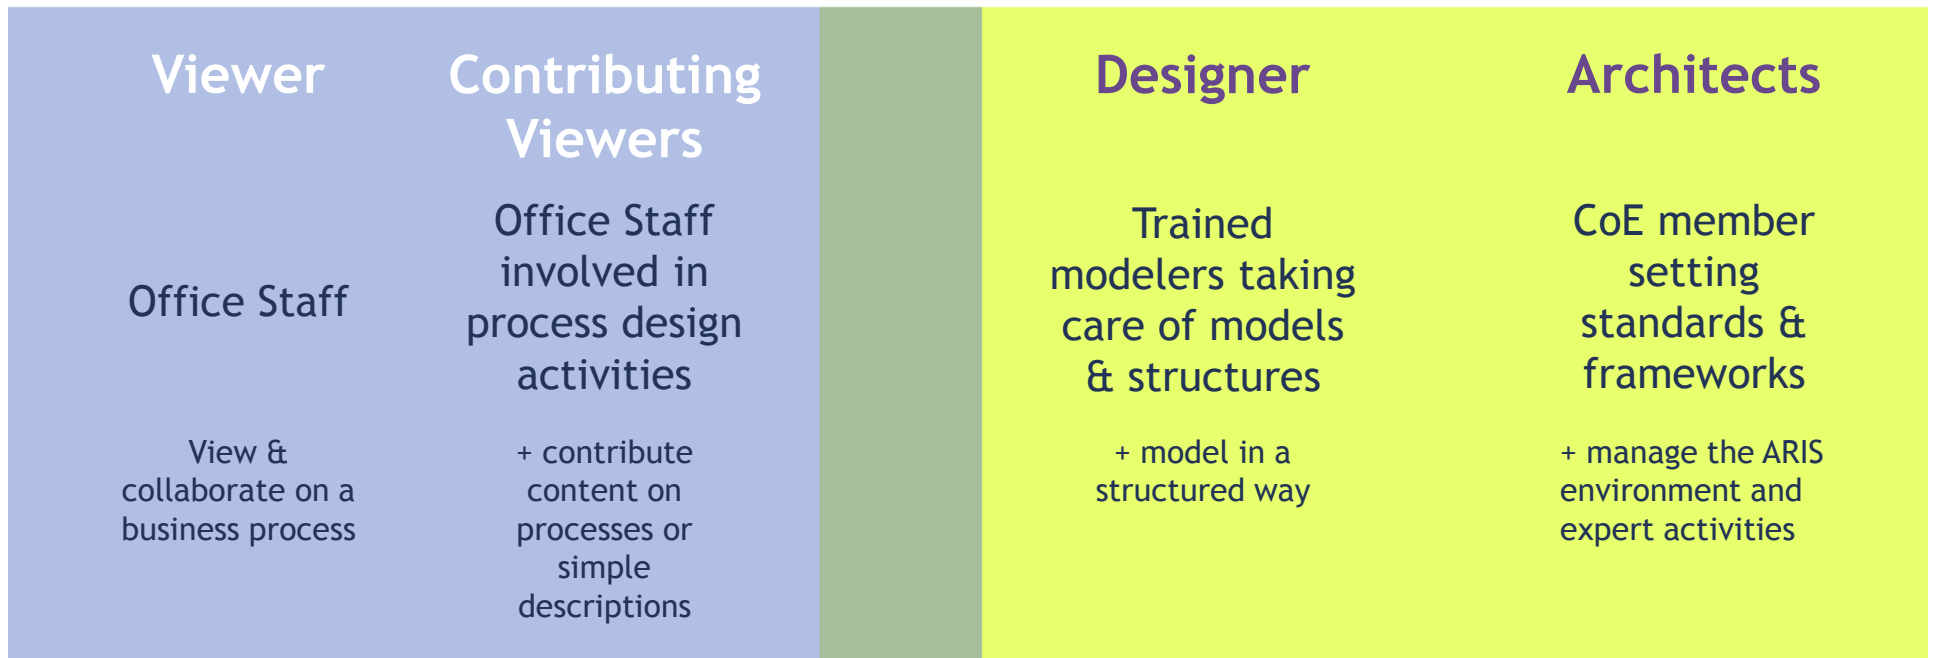

ARIS Mobile Framework drives ARIS App Ecosystem

A photograph of a person's hand resting on an open notebook. The person is wearing a silver-toned wristwatch with a black dial and a black leather strap. The notebook has handwritten notes and a diagram. The background is blurred, showing a laptop and a desk.

CAPTURING

Get more people engaged by contributing to process management activities through new CAPTURING

less ← ————— level of process management expert ————— → more

Personas - Capturing is for people who...

1. ... are business users that are not trained in ARIS regarding methods, modeling, use of filters etc. but who want/need to participate into content creation
2. ...view & collaborate around content in the ARIS repository
3. ...have the necessary knowledge on business processes and are therefore are subject to contribution activities for e.g. transformation projects
4. ...potentially can get more value with knowledge from the ARIS repository than without

MULTIPLE CONVENTIONS

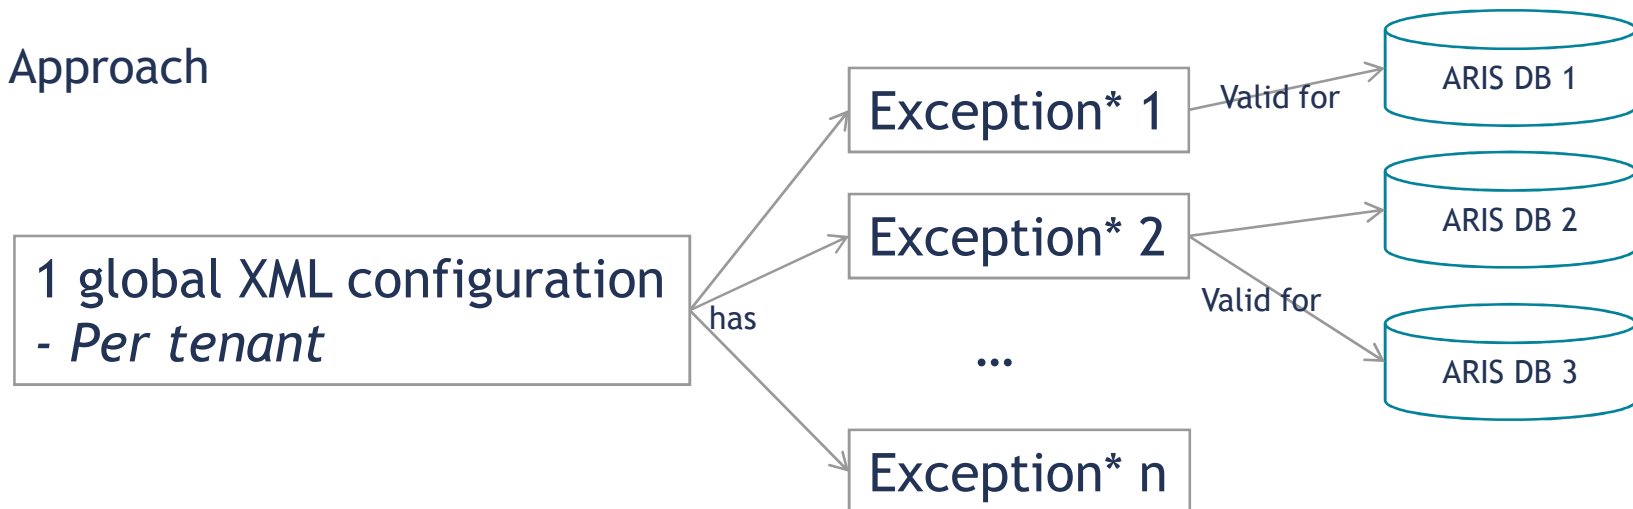

Too many cooks spoil the broth? No. They don't - diverse requirements handled via extended configurations

How does the support of multiple configurations work?

1) Do not use self-service configuration in this case (even if self-service configuration is recommended for all other cases)

2) Approach

*Exceptions handled via different configuration files in special folders

GLOSSARY, EXTENDED LISTS/TABLES

The portal provides a Glossary functionality that displays major assets from a database (YF-1081)

Glossary on

- Systems
- Roles
- Documents
- Processes

- Database-wide search for items
- This very large list gives important information and allows to navigate to the details
- The table provides an easy paging mechanism to browse even very long lists
- Users can sort by a column
- The table can be configured (columns, information to be displayed)

Much information can be better displayed through lists

The screenshot shows the ARIS connect interface for a 'Car loan application (to-be)' process. The left sidebar displays a hierarchical tree of process architecture elements. The main content area is divided into two sections: 'Activities' and 'Roles and Positions'.

Activities Table:

Summary	Type	Description	Responsible	Supporting systems
Analyse the file for decision	Manual	Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed diam nonummy...	Peter Brown	A-PLAN
Check Credit Bureau	Manual	Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed diam nonummy...	Peter Brown	A-PLAN
Check affordability	Manual	Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed diam nonummy...	Peter Brown	A-PLAN
Check completeness of loan file	Manual	Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed diam nonummy...	Peter Brown	A-PLAN
Create car loan application	Manual	Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed diam nonummy...	Peter Brown	A-PLAN

Roles and Positions Table:

Name	Description	Organisational unit
Local dealership sales rep	Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed diam nonummy...	Local dealer sales
Credit check employee	Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed diam nonummy...	Local dealer sales
Head of credit business	Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed diam nonummy...	Local dealer sales

The following aspects can be configured:

- Columns to be displayed
- Relevant item types and relevant properties (e.g. attribute types)
- Number of items displayed before paging
- Example: Display all activities, activity descriptions and roles

COLLABORATION

Collaborations gets more precise through commenting possibilities on objects

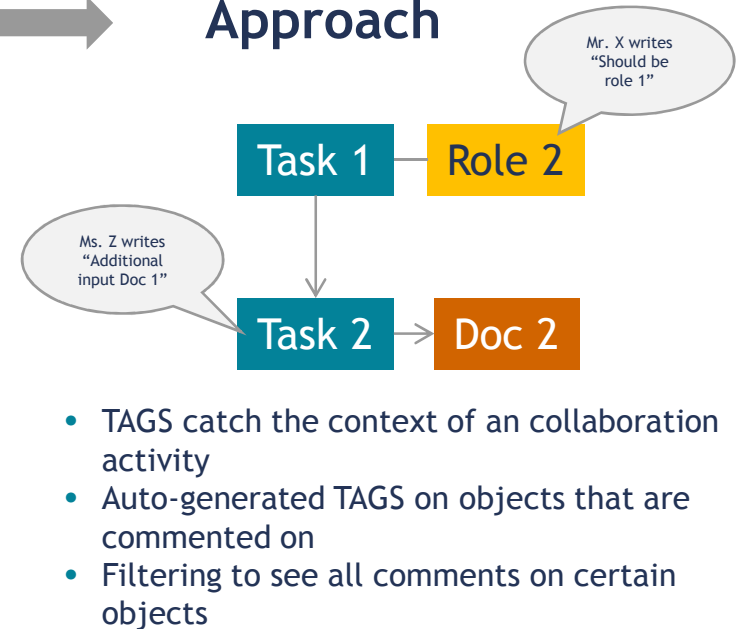

Situation

- A process design team is working globally on a new process template for Order to cash
- People from various business department have questions and requirements towards their future involvement in the process

Complication

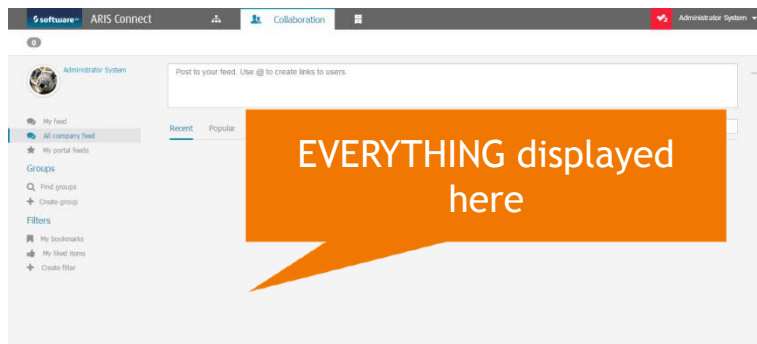

- Comments can be given for models but not for single objects within a model
- People need to filter for relevant comment by themselves which can be error-prone and expensive when having many comments

Approach

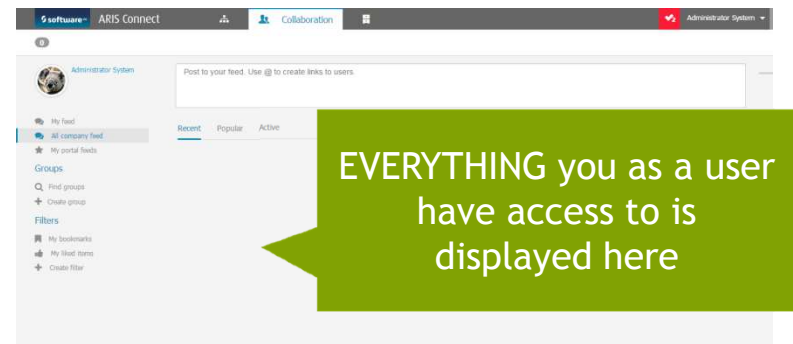

The all-company feed in the Collaboration now gets filtered to display public comments only - portal and private groups comments are filtered

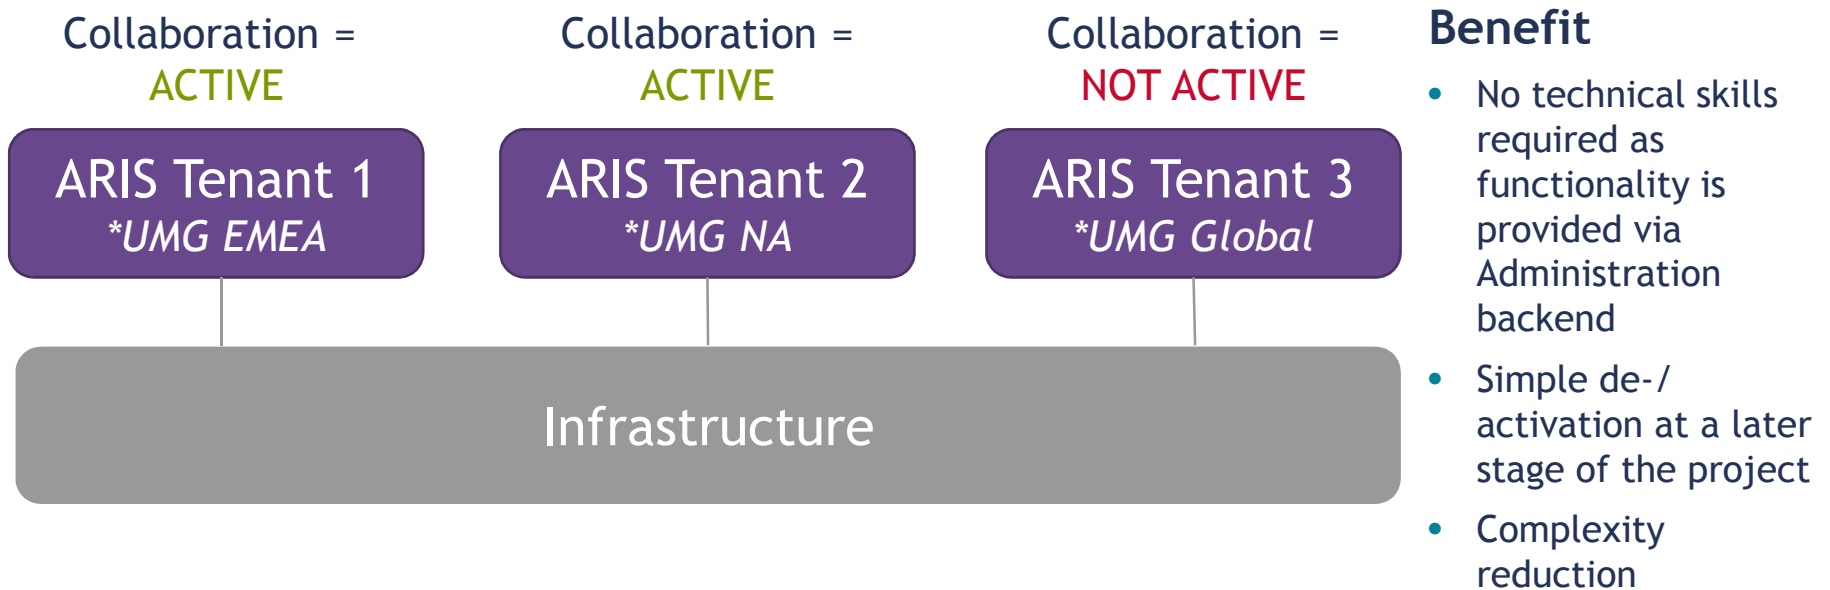

Previous behavior

With October release

Collaboration can now per activated or deactivated per tenant
