

ARIS PROCESS TRANSFORMATION & MANAGEMENT

CAPABILITIES & BENEFITS

Capability	Description	Benefits
Design	Align corporate strategy with business processes, and document, design and manage your process architecture and all related assets.	<ul style="list-style-type: none"> • Enjoy intuitive process design • Provide a “single source of truth” for business and IT • Define and secure your own design methods
Reporting	Analyze processes in terms of quality and usage and benchmark the resulting Key Performance Indicators (KPIs) to optimize processes.	<ul style="list-style-type: none"> • Analyze and optimize business processes • Benchmark your business • Quickly identify impacts and improvement potential
Analytics	Analyze process mining insights and view KPIs of real executed processes next to designed processes to make better decisions.	<ul style="list-style-type: none"> • Empower all employees with self-service analytics • Automatically identify process weak points in behavioral patterns that influence KPIs • Roll out best-practice processes across the organization
Discovery	Automatically extract data from heterogeneous application systems and rebuild every single process instance to monitor operating end-to-end processes across all relevant IT systems.	<ul style="list-style-type: none"> • Identify critical paths, probabilities and exceptions • Make better decisions by analyzing completed and running processes • Benefit from actionable insights into the real execution of your processes
Dashboarding	Get actionable insights for fact-based decisions with situation-based interactive dashboards that combine the latest KPIs next to related processes to encompass external and operational business data.	<ul style="list-style-type: none"> • Gain a deeper understanding of your daily business • Visualize data in context and determine if real KPIs match planned values • Make fact-based decisions based on reliable data analytics
Simulation	Simulate different process scenarios and their KPIs to predict the effects on the operational business and business outcome.	<ul style="list-style-type: none"> • Develop strategies for managing unexpected events • Compare as-is and to-be scenarios • Determine and improve use of resources
Model-to-Execute	Implement your ARIS-designed processes in webMethods and continuously align business blueprint and solution design to support process implementation and automation.	<ul style="list-style-type: none"> • Easily collaborate and align processes with the business • Implement changes quickly and efficiently • Automate core processes successfully
Publishing	Share information with personalized views for easy-to-find and understandable business information based on role-based access and user-specific content.	<ul style="list-style-type: none"> • Publish reliable process information fast and flexibly • Create easy-to-understand and intuitive views of business information • Improve end-user acceptance
Governance	Manage the process of process management while automating ARIS administration tasks to ensure quality and consistency, and control the lifecycle of your process knowledge.	<ul style="list-style-type: none"> • Reuse and adapt preconfigured governance workflows • Ensure process quality • Establish enterprise-wide policies, roles and responsibilities
Collaboration	Benefit from the power of collaborative process improvement while connecting and communicating with your stakeholders in public or private groups to support process improvement.	<ul style="list-style-type: none"> • Engage anyone, anywhere, anytime • Enable colleagues to trigger enhancements • Link people, processes and IT
Contribution	Leverage the process knowledge of the business, and give people without business process modeling skills the opportunity to contribute their knowledge.	<ul style="list-style-type: none"> • Get business involved in process management • Benefit from easy-to-use, inline editing • Secure complete, up-to-date and relevant process information

Capability	Description	Benefits
Document storage	Keep control of your documents, and store and link your documents in the built-in ARIS Document Storage. Upload, download and delete documents, even multimedia content, and share them in the community in their real business context (e.g., a business process).	<ul style="list-style-type: none"> • Access documents anywhere, anytime • Protect document access • Manage process-related documents efficiently
Mobile access	Create your own ARIS applications (mobile or non-mobile) for your specific use cases, and secure immediate access and interaction with process-based information.	<ul style="list-style-type: none"> • Increase end-user acceptance • Expand use of process documentation • Improve information flow and business involvement
Repository	Manage business-related information and its access in the central ARIS repository offering (extensible) using method-based and multi-language data management, versioning and centralized user management.	<ul style="list-style-type: none"> • Create a "single truth" for enterprise process information • Effectively manage process assets and users • Ensure availability of quality information
Connectivity for SAP® Solutions	Secure the success of your SAP solution while designing SAP processes and synchronizing them with SAP® Solution Manager—ideal for customizations, testing, training and roll outs.	<ul style="list-style-type: none"> • Save time and ensure quality of your SAP solution • Lower TCO with ARIS and SAP Solution Manager • Create a common platform between business and IT
Test design	Ensure processes work the way they should with process-oriented testing. This includes test path recording, automatic test variant generation and export to SAP Solution Manager and other standard testing applications.	<ul style="list-style-type: none"> • Improve process quality with process-oriented testing • Save time by reusing existing data and processes • Reduce risks of incomplete testing

ABOUT SOFTWARE AG

Software AG (Frankfurt TecDAX: SOW) helps companies with their digital transformation. With Software AG's Digital Business Platform, companies can better interact with their customers and bring them on new 'digital' journeys, promote unique value propositions, and create new business opportunities. In the Internet of Things (IoT) market, Software AG enables enterprises to integrate, connect and manage IoT components as well as analyze data and predict future events based on Artificial Intelligence (AI). The Digital Business Platform is built on decades of uncompromising software development, IT experience and technological leadership. Software AG has more than 4,500 employees, is active in 70 countries and had revenues of €879 million in 2017. To learn more, visit www.softwareag.com.
